It's possible to run a PHP (or SSI code) file as a regular HTML file in a folder, or in a whole account, by editing the .htaccess file and adding this code:

To run a PHP as an HTML:

```
AddType application/x-httpd-php5 .html .htm .php  
AddHandler application/x-httpd-php5 .html .htm .php
```

To run a SSI code as an HTML:

```
AddHandler server-parsed .html .htm
```
